Cutting edge technology and full equipment as a standard

NO COMPROMISE FOR QUALITY

All components used by CEMAS are from world leading suppliers and never sub-brands.

Safety is our ultimate goal, as well as a prompt availability of spares worldwide.

ERGONOMIC LOADING STATION

Special care was devoted to the manual loading steps of the process, both for small and large machines: to minimize effort on the backbone, the loading/unloading area was kept as close as possible to operator. For unmatched ergonomic we designed a full electrical super fast sliding table (optional). The height of the vibrating head is adjustable to meet any cycle requirements.

SAFE

Light curtains are fitted as a standard to ensure maximum operator safety, further to decreasing the total cycle time of each welding. Light curtains are integrated to protect them against collisions and as a result of an extremely accurate and well defined design.

WIDE REAR OPENING

Since the very beginning, all our vibration range was conceived to get tool change from the back of the machine, as maintenance door opening size always exceeds the width of the press bed.

COMPACT BUT COMPLETE

CEMAS machines are the most compact machines available on the market, keeping engineering and vibration features unchanged, thus favoring ergonomics.

HIGHLY CUSTOMIZABLE

Many standard features included in our machines are optionals for competitors and, should this not be enough, just turn the page to discover a full range of over 60 optionals for your tailor-made machines.

EASY MAINTENANCE

The use of the latest-generation electronic components has resulted in a remarkably smaller control panel. This change has totally cleared an inner compartment and has made tooling maintenance and set up operations easier. Machines can be moved using a fork lift or a bridge crane without dismantling the sound-proof booth.

CLEAN AND QUIET

Hydraulic power plant outside of the machine and electrical cabinet detachable.

INNOVATIVE OPERATOR INTERFACE SYSTEM

Accurate does not mean complicated: no other machine on the market is so "user friendly".

We have made a big effort in designing our video graphic to simplify any operation. Actually, there would be no need for operator's training.

- Switching to your language is as simple as pressing a key
- Parameters can be set to include up to 8 different welding steps
- Tool movement graphic programming: no need to call us for a new tool!
- Monitoring of the "just in time" process by displaying welding diagrams
- Constantly linked to CEMAS through the Teleservice system for diagnostics and customer's service on line

Graph screen

Tool programming

Production screen

Statistical analysis

63 TOOL MEMORIES

The machine can store up to 63 different equipment parameters, of which 31 are automatically acknowledged. Data can be easily copied to other machines if needed.

SHORT DELIVERIES

Ask for info: it's quite usual to get a 100Hz machine in less than 8 weeks!

REALTIME TUNING

Our innovative generator is able to adjust the vibration frequency with no autotuning procedure. Internal values are checked and updated every 5ms to constantly ensure a perfect match of the equipment with the machine.

ENERGY SAVING TECHNOLOGY

Big welding area and low power required: this is energetic efficiency!

QUICK VIBRATION STOP

This cutting edge feature can zero the vibration in less than 50 ms, for a more homogeneous and resistant joint.

Top quality and cost-effectiveness

* Thanks to our third-generation controller we have been able to eliminate the necessity of the auto-tuning cycle: the machine can adapt to the vibration frequency in real-time following the mechanical reactions of the vibrating system. Therefore, the outcome is a neater and more efficient vibration than the one obtained employing second-generation old systems.

** Peak values can be higher for short periods depending on the application.

950

ST STANDARD VERSION

100 Hz machine, highly sturdy for welding large components. Ideal for a small-to-medium sized dashboards. It can also be used for welding washing machine drums.

The machine comes in two versions, Standard and High Level. Due to a thorough ergonomic study, CEMAS's machines are among the best currently available on the market. Since the very beginning, we have succeeded in offering to our customers machines having a load position as close as feasible to the work area. Our 950 is no exception to the rule.

UPPER PLATE

LOWER PLATE

HL HI LEVEL

The HL version is different to the standard one as it includes some features making the machine even more flexible and powerful than ever. Just to mention some of the major changes, the welding power has been increased, more complex equipment and cycles can now be controlled, a teleservice module and a heavy duty vibrating plate have been included to make the machine suitable to frequent equipment changes.

999

HL

HI LEVEL

This is one of the largest vibration machine and it can be used for large dashboards, pallets, outdoor furniture.

Equipped with an electrical sliding table as a standard series feature, it can clear every undercut and make loading/unloading operations easier.

UPPER PLATE

LOWER PLATE

XT

EXTENDED

The XT version is even bigger than the HL one.

This machine keeps the same standards of precision and power of the 999 HL machine, but with an increased body (+300 mm), designed for very special and oversized components. No component is too big for this machine!

OPTIONALS

Rear door with transparent window	□	□	□	□	63
Soundproof cabin with electrical cabinet and OP on left side.	□	□	□	□	64

¹ Venturi system

² 1 vacuum circuit

³ Optional with vacuum pump.
Up to 4 circuits

⁴ Optional with venturi system

⁵ Mechanical stops + sensors + hydraulic clamping system

⁶ Allow fine regulation for pressure up to 5600Kg

⁷ Suggested for frequent toolchange operations

⁸ According to customer requirements

⁹ On electrical cabinet and hydraulic unit

¹⁰ 4 colors
